

CUSTOMER EXPERIENCE PLAYBOOK

A practical framework for designing consistent, measurable experiences that earn trust, loyalty and advocacy.

Experience is the sum of every promise made, every interaction delivered, and every moment a customer remembers.

Customer Experience Philosophy

Experience is a business system, not a department.

A customer experiences the company as one brand - not as separate teams.

The role of Customer Experience is to remove friction, create consistency and ensure that the company delivers on its promises across the entire customer journey.

UNDERSTAND

Listen to customers and identify needs, expectations, emotions and friction.

DESIGN

Create journeys, processes and standards around customer outcomes.

DELIVER

Enable teams to provide consistent, human and efficient experiences.

IMPROVE

Measure the journey, learn from feedback and continuously remove friction.

CX NORTH STAR

Make it easy. Make it consistent. Make it valuable. Make it human.

The strongest experiences reduce customer effort while strengthening trust.

The End-to-End Customer Journey

Design the experience across moments, channels and ownership boundaries.

THE CX QUESTION AT EVERY STAGE

What is the customer trying to achieve, what might get in the way, and what should they feel when this interaction is complete?

Journey mapping should capture customer goals, touchpoints, emotions, pain points, ownership and improvement opportunities.

Moments That Matter

Not every touchpoint has equal emotional or commercial impact.

Prioritize the interactions customers are most likely to remember - especially those involving uncertainty, effort, money, failure or trust.

FIRST IMPRESSION

Website, referral, sales conversation

TRUST

FIRST VALUE

Activation, implementation, first outcome

CONFIDENCE

PROBLEM

Issue, complaint, service failure

RECOVERY

CHANGE

Upgrade, policy, product or account change

CLARITY

RENEWAL

Value review and commercial decision

COMMITMENT

FAREWELL

Cancellation or offboarding

RESPECT

Voice of the Customer System

Turn customer feedback into business intelligence, not a survey archive.

Feedback Sources

NPS & CSAT

Support interactions

Sales & onboarding

Reviews & social

Churn interviews

Customer calls

Usage behavior

Employee insight

CLOSED-LOOP PRINCIPLE

**Customers should know their feedback was heard.
Teams should know what changed because of it.**

Leadership should know which themes affect loyalty, effort, revenue and reputation.

Customer Effort & Friction Management

Loyalty grows when customers can achieve outcomes without unnecessary work.

CX improvement should systematically remove effort from high-volume and high-emotion journeys.

Service Recovery

A practical framework for complaints, failures and restoring customer trust.

1

ACKNOWLEDGE

Recognize the impact.

2

OWN

Give the customer one accountable owner.

3

UNDERSTAND

Clarify facts, emotion and desired resolution.

4

RESOLVE

Fix the issue or provide a credible path.

5

RECOVER

Restore confidence with appropriate action.

6

LEARN

Remove the root cause and close the loop.

RECOVERY STANDARD

Speed matters. Ownership matters more.

Never make the customer manage your internal organization.

The customer should receive clear accountability, realistic timelines and proactive updates.

Customer Experience Measurement

Use a balanced scorecard - perception + behavior + operations + business outcomes.

PERCEPTION

- NPS
- CSAT
- Customer Effort Score
- Sentiment

BEHAVIOR

- Retention
- Repeat purchase
- Adoption
- Referral

OPERATIONS

- FRT
- Resolution time
- FCR
- SLA compliance

BUSINESS

- GRR / NRR
- Churn
- Expansion
- Lifetime value

Measurement principle

No single metric represents the customer experience.

The story is strongest when customer perception and business behavior move together.

Customer Experience Governance

CX becomes sustainable when ownership is distributed but standards are shared.

GOVERNANCE RHYTHM

Weekly: critical friction & complaints | Monthly: VoC themes & metrics

Quarterly: journey priorities, root causes, ownership and executive decisions

Experience Standards & Quality

Translate brand promises into observable behaviors and operational standards.

CLEAR

Customers understand what happens next.

EASY

Processes minimize customer effort.

HUMAN

Communication shows empathy and respect.

CONSISTENT

The experience is reliable across people and channels.

ACCOUNTABLE

One owner remains responsible for progress.

PROACTIVE

Teams anticipate needs, risks and next actions.

QUALITY SHOULD COACH, NOT JUST SCORE.

Use QA findings to identify skill gaps, process defects and recurring customer friction.

The objective is consistent customer outcomes - not perfect scripts.

CX Improvement Prioritization

Focus resources where customer impact and business value are both meaningful.

90-Day CX Action Plan

A practical sequence for diagnosing, designing and improving the customer experience.

DAYS 1-30

LISTEN & DIAGNOSE

- Map priority journeys
- Review feedback and complaints
- Baseline CX metrics
- Identify friction themes

DAYS 31-60

DESIGN & ALIGN

- Define experience standards
- Prioritize improvements
- Assign ownership
- Build closed-loop VoC rhythm

DAYS 61-90

IMPLEMENT & MEASURE

- Launch priority changes
- Coach frontline teams
- Track leading indicators
- Share wins and next priorities

EXECUTION PRINCIPLE

Start with a few high-impact journeys and prove measurable improvement.

CX transformation should build momentum through visible customer and operational outcomes.

CX Leadership Model

A practical framework for building experiences customers remember for the right reasons.

FINAL PRINCIPLE

Customers may forget the process. They rarely forget how the process made them feel.

Design for clarity. Operate with accountability. Learn continuously. Build trust at every moment.
